

Short Description:

We created the map, home screen, Firebase database, and UI for the contact section. In addition, we finished login, logout, and registration section. Furthermore, our map is now connected to the St. Louis crime data API, and crimes in St. Louis are pinpointed in the correct locations. We also finished automatically updating the user location on our database. We did not complete all the functionality in our timeline due to some extra time used in setting up the database.
